

SENTINEL®

X800 Fast Acting Cleaner

Rapid cleaner for
older systems

PROTECT YOUR
BOILER

**TINY PARTICLES
BIG PROBLEMS**

It's more important than
ever to protect ErP rated
boilers against pump and
heat exchanger failures

Treat it with Sentinel

PROTECT YOUR **BOILER**

**Approximately 87%
of boiler call-outs
are to systems
without correct
water treatment.**

Source: major boiler manufacturer
testing and research

Limescale and corrosion are
often the primary causes of
boiler and component failures.

In new high efficiency boilers,
it's crucial that the system is
cleaned and protected.

Why use X800 Fast Acting Cleaner?

**The new X800 Fast Acting Cleaner is engineered
to give a system older than 6 months a deep
clean in the fastest time yet.**

Corrosion not only prevents efficient heat transfer but
also increases wear and tear on components, and can
lead to boiler failure.

To restore efficiency to a system, clean with X800 Fast
Acting Cleaner. The new formula provides a powerful
clean, removing iron oxide and calcium based deposits
from heat exchangers, radiators and pipe work.

- **Cleans systems in 1 hour**
- **Ideal for use with powerflushing machines**
- **1L bottle suitable to treat a typical
domestic system**

Cleaning a dirty central heating system could save you up to £142 each year.*

*Based on the cost of replacement heat using an electric heater.

Use Sentinel X800 Fast Acting Cleaner as part of The Sentinel
System best practice approach to water treatment:

Clean with the
appropriate cleaner

Protect with
X100 Inhibitor

Maintain with
X100 Quick Test

Minimises time on site

Unrivalled chemical technology reduces circulation time to just 1 hour.

Targeted dissolution of corrosion debris

Restores system circulation, reducing future breakdowns.

Works in cold systems

Suits distressed systems where no heat is available.

Ideal for powerflushing

Excellent performance in combination with the Sentinel JetFlush Rapid®.

Easy to dose into a system

1. **Powerflushing:**
Follow the machine manufacturer's instructions.
2. **Open systems:**
Dose via feed & expansion cistern, via a by-pass feeder or use a dosing vessel.
3. **Sealed systems:**
If the system is empty, add to any convenient point before filling. If full, use a dosing vessel to inject via the filling loop or other access point.

For continued protection, dose the system with Sentinel X100 Inhibitor after cleaning to prevent the occurrence of limescale build-up and corrosion.

Powerflushing

Powerflushing is the process in which the entire interior surfaces of a heating system are cleaned using water at high velocity, but at low pressure so that there is no physical damage to the system. Any debris inside the system is dislodged and removed.

X800 Fast Acting Cleaner can be used in conjunction with the Sentinel JetFlush Rapid® to provide a faster and more thorough clean for problematic, dirty systems, quickly helping to restore optimum system efficiency.

Sentinel's lightweight and portable powerflushing unit, the JetFlush Rapid
